## Water wise problem solving solutions

1. If 5 litres of water is used every time a toilet is flushed, how many litres of water would be used if the toilet was flushed 3 times?  
**5 litres x 3 flushes = 15 litres**
2. If your toilet uses 100 litres of water per day. How many litres of water does your toilet use in a week?  
**100 litres x 7 days = 700 litres**
3. If your shower uses 400 litres of water a day. How many litres of water would it use in two days?  
**400 litres x 2 days = 800 litres**
4. If your shower uses 300 litres of water a day, and your toilet uses 100 litres of water a day, what is the total amount of water used by the shower and toilet in a day?  
**300 litres + 100 litres = 400 litres**
5. If your school had 4 toilets and each one used 10 litres of water a day, how much water would be used altogether?  
**4 toilets x 10 litres = 40 litres per day**
