## Mini water cycle

Name/s: \_\_\_\_\_

Follow the steps below to make your own mini water cycle. This is best done outside in a sunny position. There are also some questions to answer.

What you will need:

- A plastic mixing bowl (large enough to fit the mug inside)
- Plastic wrap (cling film)
- A mug
- Permanent marker
- Masking tape
- Water (see step two to determine how much you will need)
- Scissors

What to do:

1. Place the mug in the bowl.
2. Pour water into the bowl until it comes about 2/3 of the way up the mug (do not put any water in the mug).
3. Use the permanent marker to mark the water level on the bowl.
4. Cover the bowl and the mug tightly with plastic film. Make sure it is secured in place with masking tape.
5. Place the bowl in a sunny outdoor position (if you haven't done this already).

Wait and watch what happens.

What do you think will happen to the water?
