

Water break down observations

Name/s: _____

Use the table below to record your observations during the water break down experiment. There are also some questions to answer on pages 3 and 4.

Litter Item	Week 1	Week 2	Week 3	Week 4	Week 5

Litter Item	Week 6	Week 7	Week 8	Week 9	Week 10

Before the experiment

Making predictions

1. Which litter item do you think will break down the quickest?

2. Which litter item do you think will break down the slowest?

After the experiment

The results

1. Which item(s) showed the fastest break down rate?

2. Which item(s) showed the slowest break down rate?

3. Were there any items that did not change at all during the experiment? List them below and note why you think they did not change.

Reflection and evaluation

1. Why do you think some items broke down more quickly than others?

2. Did any results surprise you? Which ones and why?

3. If you conducted this experiment again, what would you change and why?

4. Can you think of other factors that could be tested in this experiment, if you repeated it (e.g. fresh water vs salty water)?

5. Based on the information collected in this experiment, what conclusions can you make about the impact of litter in the ocean?
