Waste assessments and audits

KESAB provides services to support your business by assessing current waste systems and their performance.

*Better waste management can save your business money, as well as meeting environmental and sustainability goals.**

Bin Systems Assessment

A Bin Systems Assessment (BSA) is the first step in understanding waste generation at your site and opportunities for improvement, providing:

- assessment of existing bin systems and suitability for material types generated
- identification of waste-reduction opportunities
- practical and actionable recommendations

Following the assessment, KESAB's detailed report provides key recommendations and information specific to site needs. BSAs take approximately 60-120 minutes, depending on the site size/complexity, with some pre-planning required.

Bin Materials Audit

A Bin Materials Audit (BMA) delivers a comprehensive analysis and quantification of the waste generated by your site in a 24 hour period. The BMA will provide:

- Valuable baseline data on the composition of waste streams to support reporting requirements and progress tracking
- volume and weight of materials
- current rates of diversion
- resource recovery improvement opportunities

A BMA analyses waste material generated by the site in a 24-hour period or longer if required.

You will receive a comprehensive report detailing materials, types, and volumes, as well as recommendations for internal education and improved resource recovery to save landfill costs, optimise waste disposal, and provide better environmental outcomes.

**Some Councils may provide subsidies to businesses to undertake these assessments. Please check with your local Council or ask KESAB.*

Resource development and staff training

As experts in waste education, KESAB is well-equipped to support your business with resources tailored for your staff and customers / clients.

Bin Signage

Clear, well designed signage is essential for effective waste management. Poor or outdated signage can lead to confusion and contamination, particularly where language or accessibility barriers exist. KESAB can develop signage tailored to your systems and users, supporting correct disposal and improved waste management outcomes.

Waste Management Plan

Building on data collected via your bin system assessment and/or bin materials audit, KESAB can work with you to develop a waste management plan specific to your business needs and aspirations.

KESAB staff will collaborate with you to set waste reduction and diversion targets, and your waste management plan will provide the framework for action and measurement of progress.

Drawing on our sector knowledge, KESAB can also help your business navigate the impacts of South Australia's ongoing single-use plastic bans and other relevant legislative changes and other legislative and reporting changes.

Staff Training + Education / Induction Materials

To support your ongoing waste efforts, KESAB can develop and deliver training for your team, including small and large group sessions and workshops, as well as induction materials for new starters.

We offer presentations or interactive sessions like recycle relays, practical workshops focusing on accessible waste avoidance (and often money and energy saving) like conscious cooking or DIY products. These fun, informative and empowering sessions can support staff practices at home and at work, whilst offering team bonding opportunities and encouraging a culture of sustainability.

Responsible waste management is key to improving your business sustainability outcomes. KESAB can help embed circular economy principles into your business planning. This may include support with procurement policies, identifying materials for reuse through systems, partnering with other businesses or other areas you wish to explore.

Waste education and opportunities

"Which bin" introduction to your business waste

A perfect introduction to the 'what, how and why' of waste and recycling, sustainability, and the circular economy. A KESAB Education Officer will engage your staff with this informative presentation, that covers waste from bin to resource recovery. Optional interactive game for staff comprehension and team building.

Approx 60 minutes

First session $400 +GST
Consecutive sessions $180 +GST

Additional costs may apply if tailoring sessions to suit waste disposal systems of a workplace.

Business Tours

Do you want to better understand what really happens to your waste in SA?

Join an experiential KESAB business tour of operational sites to make connections across SA businesses and in the resource recovery/ sustainability sector in Adelaide and surrounds.

KESAB can also tailor bespoke tours to suit your specific areas of interest, including emerging technology and innovation, specialist recycling, and socially-focused enterprises.

Corporate Volunteering – Road Watch

Road Watch is a volunteer litter clean-up program, run in partnership with the Department for Infrastructure and Transport. KESAB's ongoing volunteer groups adopt a minimum of 2km of roadway and undertake approximately four clean-ups a year. KESAB can facilitate once off or regular corporate litter clean up days for businesses. All equipment is supplied.

Waste Separation Bins

KESAB's reusable cardboard InBins and Litter Bins make waste separation easy. Perfect for businesses, government offices, schools, homes, annual events, special functions, and for use at sporting events. Contact KESAB for further information on collection and delivery options.
